

YOUR PASSION

I start with passion because if you don't have this, you will never succeed. It is a necessary condition (you must have it) but not a sufficient one (you need other things, too). Without passion, when you hit those tough times—and you will, without question—you will not be able to fight through.

By definition, a startup is about doing something that has never been done before. You are experimenting every day in new terrain, and you and your team will be way out of your comfort zone. You and they must be. It is all so new. You hope to succeed, but you will fail, in ways big and small, and often. Failed experiments are part of the startup experience. Just like in sports, where no great player has ever made all the shots he takes nor won every game she plays, you will do a lot of things that don't work right away, or don't work at all. You have to have a passion to fight through these temporary setbacks.

Passion Checklist

	I understand that...	Yes	No
1	Founding a company will be really, really hard and I still want to do it.	Yes	
2	It will be a lengthy process loaded with humiliating failures along the way, and I must learn from them and not take them personally.	Yes	
3	I cannot do it alone.	Yes	
4	The path to success is not an algorithm with set rules to follow, but an iterative process where I can only increase or decrease the odds of success, but I cannot guarantee anything. Even if I achieve success, it is only temporary.	Yes	
5	The goal is to make an "anti-fragile" organization—one that gets stronger over time when faced with problems, failures, uncertainty, and surprises.	Yes	
6	When others provide advice, I will listen, but I will also recognize that it is up to me to choose which advice to implement, and how to implement it, since only I own the final results and accountability.	Yes	
7	I will have to leave my comfort zone every day to grow and continue to be successful.	Yes	
8	I am doing this for more than the money. I believe in my cause and my team.	Yes	

[illegible]

Idea/Technology Brainstorming Notes

Use this chart to help identify your team's knowledge, skills, and interests, which can help you come up with market pull (or tech push) ideas.

Knowledge: What was the focus of your education/career?	Civil Engineering background, Data Science & AI/ML integration, Computer-Based Testing (CBT) architectures.
Capabilities: What are you most proficient at?	Full-stack development, zero-code test authoring, anti-cheating security, financial modeling, GTM planning
Connections: Who do you know with expertise in different industries? Do you know other entrepreneurs?	I know students, educators, and early-stage entrepreneurs who can provide feedback, mentorship, and industry insights related to edtech and online assessment platforms.
Financial assets: Do you have access to significant financial capital, or will you be relying on personal savings to start?	Bootstrapped via co-founders' personal savings; seeking pre-seed/seed funding (utilization plan: ₹1.66 Lakhs for 6 months).
Past work/life experience: In previous jobs you've held, or in previous experiences in your life, what inefficiencies or "pain points" existed?	Experienced the shift to CBT high-stakes exams (like JEE) first-hand. Observed local teachers struggle with complex LMS tools or basic Google Forms.
Passion for a particular market: Do you want to improve healthcare? Education? Energy? Transportation?	Education and EdTech. Passionate about bridging the "Simulated Reality Gap" for rural/Tier 2 students.

Market Pull Mini-Canvas

1. WHAT: What is the general problem we are trying to solve or the opportunity we are looking to capitalize on? Zero-code tool to help local tutors convert paper files (PDFs/Images) to online CBT tests in minutes. Providing educators to take exams in high proctoring environment, scheduling and easy to analyse their students performance on mass level. Providing students to deeply analyse themselves with AI mentor.	2. URGENCY: This is a: (circle one) • Vitamin pill (i.e., nice to have) • Pain killer (i.e., solves a critical problem) • Game changer (i.e., opens new market opportunities)
3. WHY US: Our team has or would have the following assets that would make us uniquely qualified to implement this idea: Our team has technical expertise, firsthand understanding of competitive exam preparation, and experience building scalable online assessment systems. This combination helps us solve real student pain points more effectively than generic platforms.	4. PASSION: Summarize why our team cares so much about this idea that we are willing to embark on this arduous & humbling journey: Levelling the playing field for local tutors and preventing rural students from facing exam-day panic due to lack of digital practice. Affordable solution for all students, teachers and institutions.

Technology Push Mini-Canvas

1. WHAT: Description of the invention/technology: AI/ML-based document-to-test parser and lightweight proctoring stack, mass level online examination without server crash, real time progress monitoring and easy and smooth exam setup enabling on individual level..	2. WHY US: Why we have a significant advantage over anyone else with regard to this invention: Om and Manish's integrated M.Tech in Data Science provides proprietary scoring and section-marking capabilities with high level analysis implementation.
3. LEAP FORWARD: Compared with the most relevant current alternative, why is it so compelling that it will make people and industries change: Converts a static file to an interactive test with proctoring in one click, compared to hours of manual entry in Moodle. Provide deep analysis for students with AI mentor.	4. PASSION: Summarize why our team cares so much about this idea that we are willing to embark on this arduous and humbling journey: Integrating advanced AI to make human tasks (grading/exam creation) simple.

Name	How do we know each other?	Knowledge	Skills	Passions/Interests	Founding Team Potential
Manish Nayak	Roommates in first year of our college. we have done many course projects together.	Backend systems, security, proctoring	Backend development, infrastructure	Secure online testing	The Hacker (Technical Lead)
Nirwair Kr. Chaudhry		Business, pricing, market validation	Leadership, GTM, planning	Edtech entrepreneurship	The Hustler (Business Lead)
Om Shende		AI integration, UX, assessment logic	Full-stack development, product design	AI-powered learning experiences	The Hipster (Product & Design Lead)
