

Disciplined Entrepreneurship Workbook

Step 3: Build an End User Profile for the Beachhead Market

General Exercises to Understand Concept

1. Pick a successful product that you know well. Who do you think the target end user is for that product? Write down the demographics and psychographics.

Demographics (your guess): Students aged 15–25, living in Tier 2/3 cities and rural India, from middle-to-low income households, preparing for JEE/NEET or any types of government exams which will be CBT.

Psychographics (your guess): Ambitious but resource-constrained; values emotional connection and motivational lectures; feels alienated by high-priced corporate coaching centers.

Now go to the product's website, and look up advertisements for the product in the media, and see if the message there is consistent with your profile. Do the end users depicted look like what you expect them to? Is the product appealing to the priorities of your profile?

Demographics (per website/ads): The website and ads clearly target middle-class families in tier-2/3 cities and local coaching institutes with low, pocket-friendly subscription prices.

Psychographics (per website/ads): They sell the idea of trust in "Alakh Sir" and focus on a student revolution for low-cost, quality education.

What messages, images, proxy products, and other factors give you hints as to the product's end user profile: Ads show how local institutes using and increasing productivity and giving real time experience of real exam and emphasize fairness in education.
2. Politicians and their teams are extremely aware of “end voter” profiles. Pick two candidates who are competing directly against each other in a current or recent election, and try to define each candidate's “base,” their core group of voters, which is analogous to beachhead market. In doing so, look at the candidates' contrasting messages and images and notice how they reassure and attract these people to the candidate.

	Candidate 1: <u>Narendra Modi (BJP)</u>	Candidate 2: <u>Rahul Gandhi (INC)</u>
Demographics of Base:	City-dwelling middle class, younger first-time voters, and small shop owners in North and West India.	Rural poor, minority communities, and public sector workers, mostly in Southern and Eastern states.
Psychographics of Base:	Aspirational, highly nationalistic, and want strong, clear leadership and fast development.	Care about welfare schemes, social justice, and secularism, and are worried about rising inequality.
“Proxy products” – what things do members of the base actually do in their lives that demonstrate they might be inclined to support the candidate?	Frequently share posts on X & WhatsApp, watch mainstream news channels, and use UPI payments daily.	Join local worker unions, read traditional newspapers, and support state-level welfare programs.

What watering holes do members of the base frequent?	Local tea stalls, trader association meets, and WhatsApp chats.	University campus debates, rural village meetings, and local worker rallies.	
What is the biggest fear or motivator of their base?	Motivated by national pride and growth. Feared by political chaos.	Motivated by equality and justice. Feared by loss of democratic rights.	

Worksheets

End User Profile for Beachhead Market	
Demographics (be sure to determine which relevant for you situation but some general categories are gender, age, income, geography, job title, education, ethnicity, marital status, political affiliations, etc.)	• Role & Income: Senior subject teachers who design tests at local centers. Earning ₹20k to 80k monthly. • Center Size: They work at tier-2/3 coaching centers with 100 to 500 or 1000 students. • Education: Usually engineering or science graduates who know their subjects well but are not good with software or lack of practice on online and lack of detailed evaluation with AI like mentor.
Psychographics (as above this needs to be customize for you situation but examples are aspirations, fears, motivators, hobbies, opinions, values, life priorities, personality traits, habits, etc.)	• Aspirations: They want their local center to look as professional and tech-savvy as online EdTech brands. • Guilt & Fears: They feel guilty for making students take paper tests when the real exam is online, but they are terrified of complicated IT software. • Motivators: Getting student selections and keeping their custom test questions safe.
Proxy Products (what other products does this end user own and which do they value the most? Which products have the highest correlation with your target end user)	They use WhatsApp to send mock PDFs, CamScanner to scan paper tests, MS Word (which they hate because equations and diagrams are hard to format), and handwritten sheets.
Watering Holes (e.g., locations, associations, online platforms – and sequence them in priority and indicate intensity of each)	• Physical: Staff rooms, nearby tea stalls, and local printing shops where they print test papers. • Online: WhatsApp teacher groups and Telegram channels that share mock test PDFs.

Day in the Life (describe a day in the life of the end user and what is going on in her head)	I teach classes for 5 to 6 hours a day. Late at night, I struggle with MS Word trying to format math equations and insert science diagrams for the next test. I feel bad giving paper mock tests because I know my students will face a computer screen in the actual exam, but I don't have the IT skills or budget to set up a computer lab. So I just print the paper tests anyway, wishing I had a simple way to do it online.
Priorities (what are your end user's priorities and assign a weighting to each so that it adds up to 100)	1. <u>Not typing math/science equations</u> Weighting: <u>35</u> 2. <u>Stop testing digital exams on paper</u> Weighting: <u>25</u> 3. <u>Defend center prestige against EdTech</u> Weighting: <u>20</u> 4. <u>Send reports to justify tuition fees</u> Weighting: <u>10</u> 5. <u>Let junior staff handle test setup</u> Weighting: <u>10</u>

Now that you know the profile of the end user, you can assess future interactions you have with potential customers to determine whether they are actually in your end user profile, and are worth your time, or do not fit the profile, in which case engaging with their needs will distract you from building a great product to meet a specific customer pain. And you can now estimate how many end users exist in your market, which leads us directly to Step 4, Calculate the Total Addressable Market (TAM) Size for the Beachhead Market.
